

GA CHAPTER MEMBER SPOTLIGHT

Name:	Jim Miller
Company:	Bureau Veritas North America, Inc.
Work Address:	3380 Chastain Meadows Parkway, Suite 300
Work City, State, Zip:	Kennesaw, Georgia, 30144
Work Phone:	(770) 499-7500
Work Email:	jim.miller@us.bureauveritas.com
Career Summary:	I've been in the environmental consulting plus health and safety arena for 22 years now. I have worked for NUS, OHM, GNB, MACTEC, SECOR, ERM and now BVNA. It has been straight consulting work and I definitely enjoy the longer term assignments when I'm dedicated to a project or plant. I feel consulting works best when your client views you as an in-house extension to staff. I became a CHMM in September 1999. I have several other professional certifications/designations including PGs in 5 states (# 6 is pending), health & safety (OHST and CSP), and erosion and sedimentation control (GSWCC Level II Designer).
GA-AHMP Involvement:	I joined the GA-AHMP early on in 1999, either right before or right after I passed the exam. I currently serve on the Speakers Committee along with Russ Greatorex. My favorite meeting was the north Georgia narcotics (i.e., crack) presentation because it was just a completely different topic. Didn't realize that I lived so close to such a "culturally diverse" area. The comradery at the meetings gives me the greatest value from the Chapter. I have not been to an AHMP national conference to date. I was planning to attend the September conference, but it looks like my plans are changing as I am being redeployed to the Gulf oil cleanup.

<p>Hobbies/Other Interests:</p>	<p>When I'm not working or participating in GA-AHMP, you can find me at Cobb County soccer games with my daughter and wife. I'm a big fan of muscle cars (especially Mopars) and enjoy collecting car art. Spent a bunch of money there! I also enjoy helping out with environmental projects at the school and the PTSA. Occasionally, I'll bring some boxes of rocks into the grade school science class and help the science teachers out with their rock and mineral talks. The UV glow rocks always go over big with the kids.</p>
