

GEORGIA CHAPTER - MEMBER SPOTLIGHT FORM

Name:	David Wheeler
Company:	Greenleaf Environmental Services, LLC
Work Address:	4943 Austin Park Ave
Work City, State, Zip:	Buford, GA 30518
Work Phone:	678-714-8420
Work Email:	dwheeler@greeleafgroup.net
Career Summary:	<p>I've been in "the business" since 1987, after graduating from Indiana University with a major in Environmental Science. I started working as a supervisor at a hazwaste treatment facility in Ohio, and then did stints with Chem Waste and Heritage in Chicago before I ended up in Atlanta, where my family has been since 1993. I've always been on the contracting side of the business, and have personally worked on or been involved with work on over 25 NPL sites, many of which have been removed from the List. I'm currently a principal at Greenleaf Environmental Services, where we perform field remediation and environmental construction services across the south east US and in Colorado and Wyoming. We specialize in remediation system installation, soil stabilization, dig & hauls and landfill gas extraction systems.</p>
GA-AHMP Involvement:	<p>I've been involved with the Georgia Chapter since 1993. I've been the Chapter vice-president twice, president twice, and have served as various committee chairs for five years. I currently write, edit and publish the "Award-Winning" Chapter newsletter, and coordinate the annual golf outing that raises funds for the Chapter's John J. Scarano Memorial Scholarship fund. I've found you truly get out of it what you put into it. I've made many business contacts and friends, and built a great network within the CHMM community. I've been awarded the Champion of Excellence award by the AHMP three years running, and have had abstracts accepted for the National Conference twice. I served on the National Abstract Review Committee for three years, reviewing submitted abstracts for inclusion in the technical program at the AHMP National Conference.</p>

Hobbies/Other Interests:	I vaguely remember what it is like to play golf. I enjoy spending time on the lake with the missus, and once the leaves start to turn, you can usually find me up in a tree somewhere stalking the elusive <i>Odocoileus virginianus</i> , usually with one of my two kids.
